The image shows the activation screen for Wordfence Security. On the left is the Wordfence logo, which consists of a blue shield with three white upward-pointing arrows and the word "Wordfence" in blue below it. To the right of the logo, the text reads "Wordfence Security – Firewall & Malware Scan". Below this, a paragraph states: "Secure your website with the most comprehensive WordPress security plugin. Firewall, malware scan, blocking, live traffic, login security & more." At the bottom left, it says "By Wordfence". On the right side, there is a blue "Activate" button with a white border, and below it, a blue link that says "More Details".

The image shows the completion screen for Wordfence 7.4.7 installation. At the top center is the Wordfence logo with the tagline "Securing your WordPress website". Below the logo, the text reads "You have successfully installed Wordfence 7.4.7". Underneath, it says "Please tell us where Wordfence should send you security alerts for your website:". There is a text input field for the email address. Below the input field, a small note states: "We do not use this email address for any other purpose unless you opt-in to receive other mailings. You can turn off alerts in the options." Below this, there is a question: "Would you also like to join our WordPress security mailing list to receive WordPress security alerts and Wordfence news?". To the right of the question is a toggle switch with "YES" and "NO" options, and "(Choose One)" below it. At the bottom left, there is a checked checkbox with the text: "By checking this box, I agree to the Wordfence [terms](#) and [privacy policy](#). If you qualify as a data controller under the GDPR and need a data processing agreement, [click here](#)." To the right of the checkbox is a blue "CONTINUE" button.

## ପିସିଏଚ୍ ୧୧

### Optimize Wordfence Firewall

If you cannot complete the setup process, [click here for help](#) ✕

To make your site as secure as possible, the Wordfence Web Application Firewall is designed to run via a PHP setting called `auto_prepend_file`, which ensures it runs before any potentially vulnerable code runs.

**NOTE:** If you have separate WordPress installations with Wordfence installed within a subdirectory of this site, it is recommended that you perform the Firewall installation procedure on those sites before this one.

We've preselected your server configuration based on our tests, but if you know your web server's configuration, please select it now. You can also choose "Manual Configuration" for alternate installation details.

Apache + mod\_php (recommended based on our tests) ▾

Please download a backup of the following files before we make the necessary changes:

**DOWNLOAD .HTACCESS**

Once you have downloaded the files, click Continue to complete the setup. **CONTINUE**

## පිටුව 13

**General Wordfence Options**

- Update Wordfence automatically when a new version is released? ⓘ  
Automatically updates Wordfence to the newest version within 24 hours of a new release.

Where to email alerts ⓘ

How does Wordfence get IPs ⓘ

- Let Wordfence use the most secure method to get visitor IP addresses. Prevents spoofing and works with most sites. **(Recommended)**
- Use PHP's built in REMOTE\_ADDR and don't use anything else. Very secure if this is compatible with your site.
- Use the X-Forwarded-For HTTP header. Only use if you have a front-end proxy or spoofing may result.
- Use the X-Real-IP HTTP header. Only use if you have a front-end proxy or spoofing may result.
- Use the Cloudflare "CF-Connecting-IP" HTTP header to get a visitor IP. Only use if you're using Cloudflare.

Detected IP(s): ::1  
Your IP with this setting: ::1  
[+ Edit trusted proxies](#)

- Hide WordPress version ⓘ
- Disable Code Execution for Uploads directory ⓘ
- Pause live updates when window loses focus ⓘ

## පිටුව 14

**Email Alert Preferences**

- Email me when Wordfence is automatically updated  
If you have automatic updates enabled (see above), you'll get an email when an update occurs.
- Email me if Wordfence is deactivated
- Email me if the Wordfence Web Application Firewall is turned off
- Alert me with scan results of this severity level or greater: Low
- Alert when an IP address is blocked
- Alert when someone is locked out from login
- Alert when someone is blocked from logging in for using a password found in a breach
- Alert when the "lost password" form is used for a valid user
- Alert me when someone with administrator access signs in
  - Only alert me when that administrator signs in from a new device or location
- Alert me when a non-admin user signs in
